

PROMPT FOR CREATING THE WEB APPLICATION

Create a complete responsive web application called "Campus SnackPass" for a college canteen.

The main purpose of the application is to reduce long queues in the college canteen by allowing students to browse food items, select their order, and collect the food using a digital order token.

Build the application as a single-page frontend using HTML5, CSS and Vanilla JavaScript. Use Tailwind CSS through CDN for styling if required. Do not use React or any backend.

Design the website with a modern, professional and attractive food-ordering interface suitable for college students.

Requirements:

1. Create a dark sticky navigation header with:
 - Campus SnackPass logo
 - Central Canteen status
 - Canteen TV Display button
 - Campus Wallet button
 - Order/Cart button
 - Order token/history button
2. Create a food menu section containing multiple campus canteen food items.
3. Each food card should display:
 - Food image
 - Food name
 - Description
 - Price
 - Category
 - Vegetarian/non-vegetarian information
 - Preparation time
 - Popularity/rating
 - Suitable tags
4. Add menu search functionality.
5. Add category filtering for food items.
6. Add sorting options such as:
 - Most Popular
 - Price: Low to High
 - Price: High to Low
 - Preparation Time
7. Allow users to customize food items where applicable.
8. Allow users to:
 - Add food items to the order
 - Increase quantity

- Decrease quantity
- Remove items
- View the current cart

9. Create a slide-out cart drawer containing:

- Selected items
- Quantity
- Individual price
- Subtotal
- Discounts/coupons
- Total amount

10. Provide order options such as:

- Pickup counter
- Pickup schedule
- Payment method

11. Create a Campus Wallet feature with:

- Current wallet balance
- Recharge option
- Wallet payment option

12. When the user confirms an order:

- Generate a unique order token
- Display the token prominently
- Show order details
- Show pickup information
- Tell the user to show the token at the canteen counter

13. Add order status tracking such as:

- Order Placed
- Preparing
- Ready for Pickup
- Picked Up

14. Create an Order History section showing previous orders and their tokens.

15. Create a Canteen TV/Kiosk display that shows order tokens and their status.

16. Use browser localStorage to persist suitable data such as:

- Wallet balance
- Order history
- Current orders

17. Make the interface responsive for:

- Desktop
- Laptop
- Tablet
- Mobile

18. Use a modern visual style:

- Dark slate navigation/header
- Orange and amber accent colors
- Rounded cards
- Modern typography
- Smooth hover effects
- Clear buttons
- Good spacing
- Responsive food-card grid
- Modal and drawer interfaces

19. Use Google Fonts such as Plus Jakarta Sans and Playfair Display.

20. Add suitable animations and visual feedback without making the interface distracting.

21. Keep the code organized and use meaningful IDs, classes, variables and functions.

22. Ensure the major interactions work correctly in the browser.

23. Make the project suitable for a Web Development Cluster assessment demonstrating:

- Web development fundamentals
- Logical thinking
- UI/UX design
- Problem-solving
- Frontend development

24. Provide the complete code required to run the application directly in a web browser.

Project name: Campus SnackPass

Tagline: Skip lines, order ahead, and pick up hot fresh meals with live digital tokens.
